SUMMARY

Software Engineer with **3+ years in software engineering**, including **1+ year delivering production AI**. Builds full-stack products with AI agents, agentic RAG, multimodal extraction, evaluation and human-in-the-loop controls. Works across **Python, TypeScript, React, PostgreSQL** and **AWS**, deploying GDPR-sensitive workflows on company-controlled EU infrastructure. Eligible to apply for an **EU Blue Card**.

EXPERIENCE

Redseven Entertainment GmbH (ProSiebenSat.1 Group)

Mar. 2026 – Present

Software Engineer – Applied AI (Part-time)

Munich, Germany

- Launched a production rights-clearance platform in **three months** with rights, editorial and production teams, replacing shared spreadsheets and migrating **111 licensors** into PostgreSQL with Excel-parity pricing
- Replaced an estimated **30–60-minute manual search** per complex licensing question with a cited answer by combining three cost, clearance and policy agents with pgvector retrieval over **100+ contracts**
- Saved finance a reported **10+ hours per week** by automating receipt entry and classification across **20 tax codes** for **50 staff**, at about **90% field-level accuracy**
- Maintained AI faithfulness and context-recall scores around **0.85** against a **0.70 release gate** across 50 cases; separate router tests reached **90% accuracy** and caught a tool-routing regression before release
- Prevented a wrong-licensor update during live use by placing **dozens of AI-proposed changes** behind human approval, revalidating scope before atomic writes and recording decisions in an audit trail
- Secured sensitive contract and finance data in company-controlled EU infrastructure through an internal LLM gateway, deploying two production apps with ECS Fargate, Terraform and OIDC-backed CI/CD

Arcpeak

Aug. 2025 – Feb. 2026

Software Engineer – Applied AI (Part-time)

Munich, Germany

- Enabled the platform's **first paying customers** with the founder by integrating Stripe subscriptions and JWT/OAuth sign-in into a FastAPI and React/TypeScript product
- Converted a **20-question intake** into **10 ranked AI opportunities** grounded in cited research and projected savings versus effort, giving clients a decision-ready investment shortlist
- Automated AWS releases through Dockerized services, Terraform-managed infrastructure and CI/CD, replacing manual deployment steps with repeatable launches
- Eliminated browser-triggered report restarts by persisting long-running jobs in Redis Streams and streaming completed sections to the customer dashboard
- Gated AI recommendations with fixed-baseline LLM reviews and Pytest tool-call checks in CI, keeping budgets and timelines traceable to client answers and catching invalid agent actions before release

WorkSpin

Jul. 2023 – Sep. 2025

Software Engineer (Full-time)

Karachi, Pakistan / Remote

- Architected Boardd's pre-launch backend with frontend and QA partners across **200+ REST endpoints**, **47 tenant-scoped data models** and **52 versioned migrations**, supporting collaboration, integrations and billing
- Lowered query latency by **70%** and peak database load by **50%** on WorkSpin's event-discovery app through MongoDB schema redesign, index tuning and Redis caching
- Unified imports from **eight project-management platforms** in BullMQ, testing **hundreds of tasks per run** while preserving assignees and task structure through rate-limited workers, retries and live progress
- Delivered conflict-aware task editing, presence and live updates for the Boardd workspace through scoped Socket.IO rooms, aligning API contracts with frontend engineers and QA
- Enforced tenant-specific permissions and per-device token rotation for Boardd, allowing platform admins to revoke every company session immediately when disabling a tenant

EDUCATION

University of Passau <i>Master of Science in Computer Science</i> - Major: Programming and Intelligent Technical Systems - Thesis: <i>"Code Readability as a Predictor of LLM Program-Repair Success"</i>	Oct. 2024 – Expected Oct. 2026 <i>Passau, Germany</i>
National University of Computer and Emerging Sciences (FAST) <i>Bachelor of Science in Software Engineering</i> - GPA: 3.5/4.0 (German equivalent: 1.8) - Recognized with Dean's List Honorable Mention in four semesters - Thesis: <i>"Deep Learning for User Mobility Prediction in 6G Networks"</i> - Selected to compete in the Jazz 5G Hackathon in Islamabad	Aug. 2020 – Jun. 2024 <i>Karachi, Pakistan</i>

TECHNICAL SKILLS

AI & LLM: AI agents, tool/function calling, agentic RAG, prompt engineering, LLM evaluation, LLM-as-judge
AI Tooling: OpenAI API, LangChain, LangGraph, Braintrust
Programming Languages: Python, TypeScript, JavaScript, SQL
Backend: FastAPI, NestJS, Node.js, Express, BullMQ, REST APIs, WebSockets
Frontend: React, Next.js, Redux, Tailwind CSS
Databases: PostgreSQL, MongoDB, Redis, pgvector, Pinecone
Cloud & DevOps: AWS (ECS Fargate, Aurora/RDS, S3, Secrets Manager), Docker, Terraform, Git, CI/CD
Testing & Practices: Pytest, Jest, evaluation suites, code review, Agile/Scrum
AI Development Tools: Claude Code, Cursor, GitHub Copilot, Codex
Spoken Languages: English (C1), German (A1, actively learning)

PUBLICATION

- Ris-Enhanced 6G Networks: Advanced User Location Prediction with Generative Models**
2024 IEEE 9th International Conference on Engineering Technologies and Applied Sciences (ICETAS)
- Compared GRU, LSTM and Transformer models for user-location prediction in RIS-assisted 6G networks; the Transformer achieved the lowest mean absolute error in the study
