SUMMARY

Software Engineer specializing in Applied AI, with **3+ years of software engineering experience**, including 1+ year shipping production LLM systems. Builds evaluated agents, agentic RAG and multimodal document automation with human-in-the-loop controls using **Python, TypeScript, PostgreSQL** and **AWS**. Eligible to apply for an **EU Blue Card**.

EXPERIENCE

Redseven Entertainment GmbH (ProSiebenSat.1 Group)

Mar. 2026 – Present

Software Engineer – Applied AI (Part-time)

Munich, Germany

- Owned end-to-end delivery of a rights-clearance platform, partnering directly with rights, editorial and production teams to replace shared Excel workflows and reach production in **roughly three months** for 10–20 users
- Built “Nellie,” a **three-agent, 12-tool** assistant with cross-session memory and agentic **pgvector RAG** over **100+ contracts**, reducing an estimated 30–60-minute licensing lookup to one evidence-backed response
- Gated AI releases on faithfulness and context recall using a **50-case evaluation suite**; maintained scores near **0.85** against a 0.70 threshold and caught a real tool-routing regression before production
- Designed human-in-the-loop write controls that revalidated every proposal before atomic PostgreSQL updates, blocked unsafe bulk actions and recorded approvals and rejections in an end-to-end audit trail
- Built a multimodal receipt pipeline for **approximately 50 users**, reaching roughly **90% field-level accuracy** across 20 tax-code categories and saving the finance team a reported **10+ hours per week**
- Replaced legacy pricing workflows by migrating **111 licensors** into PostgreSQL and implementing live exchange rates, billing-rule parity and non-destructive Excel import/export compatible with existing processes
- Deployed **two production applications and one internal demo** to AWS ECS Fargate using Docker, Terraform and GitLab CI/CD, with EU-hosted infrastructure, internal LLM routing and Braintrust tracing

Arcpeak

Aug. 2025 – Feb. 2026

Software Engineer – Applied AI (Part-time)

Munich, Germany

- Built a personalized AI strategy agent that converted each client’s **20-question intake** into **10 tailored use cases**, ranked by expected savings and implementation effort
- Grounded recommendations, budgets and timelines in client data and cited web research, then evaluated every release against a fixed baseline with an LLM reviewer
- Enabled the platform’s **first paying customers** by delivering Stripe subscriptions and JWT/OAuth authentication across a Python/FastAPI and React/TypeScript application
- Kept multi-minute AI report jobs recoverable across interrupted sessions using **Redis Streams**, while streaming each completed section to users in real time
- Reduced deployment time by **80%** through Docker, Terraform-provisioned AWS infrastructure and automated CI/CD
- Prevented invalid agent tool calls from reaching production by adding Pytest release gates for backend services and AI workflows

WorkSpin

Jul. 2023 – Jul. 2025

Software Engineer (Full-time)

Remote – Karachi, Pakistan

- Owned the backend of a feature-complete multi-tenant workspace platform, building a **106,000-line Node.js/Express system** spanning 47 Mongoose models, 52 migrations and **200+ REST endpoints**
- Unified imports from **eight external platforms** behind a reusable BullMQ architecture with bounded concurrency, provider-specific rate limits, retries and Socket.IO progress, tested on hundreds of tasks per run
- Reduced query latency by **70%** and peak database load by **50%** on an event platform through MongoDB schema redesign, index tuning and Redis caching

- Isolated payment operations behind a service-authenticated microservice integrating **Stripe Connect, Treasury and Issuing** for connected accounts, invoicing and virtual-card controls
- Built real-time collaboration with Socket.IO conflict handling, presence and scoped rooms, backed by tenant-isolated data access and a per-company configurable permission engine

EDUCATION

University of Passau

Master of Science in Computer Science

Oct. 2024 – Present
Passau, Germany

- Major: **Programming and Intelligent Technical Systems**
- Thesis: *“Code Readability as a Predictor of LLM Program-Repair Success”*

National University of Computer and Emerging Sciences (FAST)

Bachelor of Science in Software Engineering

Aug. 2020 – Jun. 2024
Karachi, Pakistan

- GPA: **3.5/4.0** (German equivalent: **1.8**)
- Recognized with **Dean’s List Honorable Mention** in four semesters
- Thesis: *“Deep Learning for User Mobility Prediction in 6G Networks”*
- Selected to compete in the **Jazz 5G Hackathon** in Islamabad

TECHNICAL SKILLS

AI & LLM: AI agents, tool/function calling, agentic RAG, prompt engineering, LLM evaluation, LLM-as-judge

AI Tooling: OpenAI API, LangChain, LangGraph, Braintrust

Programming Languages: Python, TypeScript, JavaScript, SQL

Backend: FastAPI, NestJS, Node.js, Express, REST APIs, WebSockets

Frontend: React, Next.js, Redux, Tailwind CSS

Databases: PostgreSQL, MongoDB, Redis, pgvector, Pinecone

Cloud & DevOps: AWS (ECS Fargate, Aurora/RDS, S3, Secrets Manager), Docker, Terraform, CI/CD

Testing & Practices: Pytest, Jest, evaluation suites, code review, Agile/Scrum

AI Development Tools: Claude Code, Cursor, GitHub Copilot, Codex

Spoken Languages: English (C1), German (A1, actively learning)

PUBLICATION

Deep Learning for User Mobility Prediction in RIS-Assisted 6G THz Networks

IEEE

- Benchmarked deep-learning models for predicting user movement in next-generation mobile networks, supporting more stable connectivity as users move through RIS-assisted 6G environments
