PROFESSIONAL EXPERIENCE

Redseven Entertainment GmbH (ProSiebenSat.1 Group)

Mar 2026 – Present

Software Engineer

Munich, Germany (Hybrid)

- Led full-stack development of three production apps using **TypeScript**, **NestJS**, **Next.js**, **React** and **PostgreSQL** on **AWS**, including a licensing platform for **30+** staff launched in three months
- Built an AI assistant for rights and production teams that answers licensing cost questions in one step instead of a **30–60-minute** manual search, using **NestJS**, the **OpenAI Responses API** and 3 specialist agents
- Shipped a receipt-processing app for **50+** finance staff in **React** and **NestJS**, saving **10+ hours per week**
- Engineered an AI extraction pipeline that reads receipt images with a multimodal LLM into JSON-schema structured outputs, reaching **90%** field-level accuracy across 20 country tax codes
- Designed an **agentic RAG** pipeline on **pgvector** over **100+** contracts and policies, so every answer cites its source
- Implemented an LLM evaluation pipeline in **Braintrust** that blocks any release below **70%** faithfulness and context recall (scoring **85%**), catching a routing bug before launch
- Automated deployments with **GitLab CI/CD**, **Docker** and automated tests on **AWS ECS Fargate**, cutting deployment time by an estimated **70%** and eliminating failed deploys
- Developed a human-in-the-loop approval flow in **React** with **RBAC**, where authorized users confirm every AI-proposed change before it is saved, preventing an incorrect licensing update

Arcpeak

Aug 2025 – Feb 2026

Software Engineer

Munich, Germany (Hybrid)

- Led full-stack development of an AI consulting platform using **Python**, **FastAPI**, **React**, **TypeScript** and **PostgreSQL**, turning **20** client answers into **10** ranked AI opportunities
- Integrated **Stripe** subscriptions and **OAuth** sign-in into the **FastAPI** platform, enabling its first paying customers
- Developed a **Python** AI agent with live web search that turns each opportunity into a cited adoption plan
- Architected a background job system with **Redis Streams** that keeps long AI reports running after users close the browser, streaming each section to the **React** dashboard
- Automated agent release checks in CI with LLM evaluation and **Pytest** tool-call tests, stopping faulty releases

WorkSpin

Jun 2024 – Jul 2025

Software Engineer

Barnet, UK (Remote)

- Led backend development of Boarddd, a multi-tenant business workspace, using **Node.js**, **Express**, **MongoDB**, **Redis** and **Socket.IO** on **AWS**, with frontend and QA engineers
- Optimized **MongoDB** schemas, indexes and **Redis** caching, cutting query latency by **70%** and peak load by **50%**
- Built a **Node.js** payments **microservice** behind service-to-service authentication on 3 **Stripe** products (Connect, Treasury, Issuing) for subscriptions, recurring invoices and virtual cards
- Engineered integrations with **8** external tool APIs (Jira, Asana, Trello and more) on a fault-tolerant **BullMQ** job pipeline with rate limiting, retries and live progress
- Designed a scalable real-time messaging backend with **Socket.IO** and **MongoDB** for group channels of **50+** members and direct messages, with threaded replies, reactions and paginated queries

EDUCATION

University of Passau

Oct 2024 – Oct 2026

Master of Science in Computer Science

Passau, Germany

FAST-NUCES

Aug 2020 – Jun 2024

Bachelor of Science in Software Engineering

Karachi, Pakistan

PROJECTS

- **InsightQL** [🔗](#) (**Next.js, NestJS, LangChain, OpenAI, Docker**): Created a natural-language database assistant that lets non-technical users query 3 database engines (**PostgreSQL, SQLite, MongoDB**) in plain English through a **LangChain** SQL agent, with charts, CSV/Excel export and JWT-secured access.
- **bugSage** [🔗](#) (**FastAPI, Pinecone, RAG**): Developed an AI debugging chatbot that retrieves relevant docs and past issues from a vector database before answering, so its **Express.js** fixes match the project's own code.
- **CLI Assistant** [🔗](#) (**Python, Ollama, Function Calling**): Implemented a fully offline terminal assistant on a local model, with an agentic loop that chains five tools to complete multi-step tasks.

SKILLS

Programming Languages: Python, TypeScript, JavaScript, SQL

Backend & Frameworks: Node.js, NestJS, FastAPI, Express, REST APIs, Socket.IO, BullMQ

Frontend: React, Next.js, Redux Toolkit, Tailwind CSS

Databases: PostgreSQL, MongoDB, Redis, pgvector

AI/ML: AI Agents, Agentic RAG, LLM Evaluation, Function Calling, OpenAI API, LangChain, LangGraph

Cloud & DevOps: AWS, Docker, Terraform, GitLab CI/CD

AI Tools: Claude Code, Cursor, GitHub Copilot, Codex

Languages: English (C1), German (A2, actively learning)

PUBLICATION

Ris-Enhanced 6G Networks: Advanced User Location Prediction with Generative Models

2024 IEEE 9th International Conference on Engineering Technologies and Applied Sciences (ICETAS)

- Compared GRU, LSTM and Transformer models for user-location prediction in RIS-assisted 6G networks; the Transformer achieved the lowest mean absolute error in the study
