SUMMARY

Full-Stack AI Engineer with **3+ years of experience** building production AI systems and full-stack applications. Specializes in evaluated agentic workflows, RAG, multimodal processing and human-in-the-loop automation using **Python, TypeScript, React, PostgreSQL** and **AWS**.

EXPERIENCE

Redseven Entertainment GmbH (ProSiebenSat.1 Group)

Mar. 2026 – Present

Full-Stack AI Engineer

Munich, Germany

- Reduced contract licensing and cost research from **30–60 minutes** to one cited AI response, enabling rights teams to retrieve evidence without manual contract review
- Built and shipped a **pgvector RAG** assistant across **100+ agreements** within three months, using iterative query reformulation and evidence-backed citations
- Saved **10+ staff hours per week** by automating receipt entry for **50 employees**, achieving **90% tax-code classification accuracy** across 20 categories
- Achieved **90% routing accuracy** across three AI agents and 12 typed tools by implementing a fail-closed classifier for low-confidence requests
- Caught a routing regression before production by gating releases on a **50-case evaluation suite**; release candidates scored **0.85** against a 0.70 threshold
- Protected finance workflows with human-approved proposals, permission revalidation before atomic database writes and end-to-end decision audit logs
- Deployed **two production AI platforms** to AWS ECS Fargate using Docker, Terraform and CI/CD, with Braintrust tracing through the internal model gateway

Arcpeak

Aug. 2025 – Feb. 2026

Full-Stack AI Engineer

Munich, Germany

- Enabled the platform's **first paying customers** by shipping Stripe subscription billing with JWT/OAuth authentication
- Produced prioritized client roadmaps by converting a **20-question intake** into 10 AI-ranked opportunities, scored by expected savings and implementation effort
- Improved recommendation reliability by grounding timelines and budgets in client inputs and cited web research, then evaluating each release against a baseline with an LLM reviewer
- Preserved multi-minute report jobs across interrupted sessions with **Redis Streams** while streaming completed sections to users in real time
- Cut deployment time **80%** with Terraform-provisioned AWS and automated CI/CD across Python/FastAPI and React/TypeScript
- Caught invalid agent tool calls before deployment by adding Pytest release gates for backend and AI workflows

WorkSpin

Jul. 2023 – Jul. 2025

Backend Engineer

Remote – Karachi, Pakistan

- Scaled a multi-tenant workspace backend to **200+ REST endpoints** while enforcing tenant isolation through scoped data access and company-level permissions
- Consolidated **eight bespoke task integrations** into one shared import framework, processing hundreds of tasks asynchronously with provider-specific rate limits and retries
- Reduced query latency **70%** and peak database load **50%** by redesigning MongoDB schemas and introducing Redis caching
- Separated payment operations into a dedicated microservice integrating **Stripe Connect, Treasury and Issuing** for multi-party billing and card issuance
- Enabled concurrent multi-user editing with Socket.IO conflict handling, presence and a configurable company-level permission engine

EDUCATION

University of Passau <i>Master of Science in Computer Science</i> - Major: Programming and Intelligent Technical Systems - Thesis: <i>“Code Readability as a Predictor of LLM Program-Repair Success”</i>	Oct. 2024 – Oct. 2026 <i>Passau, Germany</i>
National University of Computer and Emerging Sciences (FAST) <i>Bachelor of Science in Software Engineering</i> - GPA: 3.5/4.0 (German equivalent: 1.8) - Recognized with Dean’s List Honorable Mention in four semesters - Thesis: <i>“Deep Learning for User Mobility Prediction in 6G Networks”</i> - Selected to compete in the Jazz 5G Hackathon in Islamabad	Aug. 2020 – Jun. 2024 <i>Karachi, Pakistan</i>

TECHNICAL SKILLS

AI & LLM: AI agents, tool/function calling, agentic RAG, prompt engineering, LLM evaluation, LLM-as-judge
AI Tooling: OpenAI API, LangChain, LangGraph, Braintrust
Programming Languages: Python, TypeScript, JavaScript, SQL
Backend: FastAPI, NestJS, Node.js, Express, REST APIs, WebSockets
Frontend: React, Next.js, Redux, Tailwind CSS
Databases: PostgreSQL, MongoDB, Redis, pgvector, Pinecone
Cloud & DevOps: AWS (ECS Fargate, Aurora/RDS, S3, Secrets Manager), Docker, Terraform, CI/CD
Testing & Practices: Pytest, Jest, evaluation suites, code review, Agile/Scrum
AI Development Tools: Claude Code, Cursor, GitHub Copilot, Codex
Spoken Languages: English (C1), German (A1, actively learning)

PUBLICATION

Deep Learning for User Mobility Prediction in RIS-Assisted 6G THz Networks	IEEE
Benchmarked deep-learning models for predicting user movement in next-generation mobile networks, supporting more stable connectivity as users move through RIS-assisted 6G environments
